I to agree with the Kenwood's assertion that.

"Auxiliary operation is "poorly defined" in the FCC rules and
"significantly overregulated."

And that "present limitations on auxiliary operation no longer
are appropriate in today's amateur environment and should be
withdrawn."

I do not agree that the 2 meter band is as crowded as some have said.
I live in the very "Amateur" populated state of Florida and all you
have to do is scan the 2 meter band to find out the except for some
of the repeater frequencies that the band is virtually void of
users .

In this day of declining Amateur radio users I believe that we
should support Part 97.1 (b).

" Continuation and extension of the amateur's proven ability to
contribute to the ADVANCEMENT OF THE RADIO ART "

My vote is a yes in favor of Kenwood RM-10313
